Y Shares	38.44	15.35	-7.32	22.10	25.46	-6.99	3.44	-2.06	26.90	-5.48

Both I & Y shares are not available for all investors. See the prospectus for details.

### Average Annual Total Returns and Expense Ratios %

	1-Year	3-Year	5-Year	10-Year	15-Year	20-Year	Life
A Shares w/o Sales Charge	-2.26	7.11	3.44	7.16	8.43	7.07	7.82
A Shares w/Sales Charge	-7.88	5.01	2.22	6.53	8.00	6.76	7.54
I Shares	-1.86	7.56	3.89	—	—	—	7.05
Y Shares	-2.01	7.38	3.70	7.54	—	—	6.71
MSCI ACWI ex-US	1.76	9.97	4.12	5.18	7.20	—	—

Annual Expense Ratio: Gross: A shares: 1.10% / I shares: 0.69% / Y shares: 0.85%. Class A inception date is 3/25/1996. Class I inception date is 3/29/2012. Class Y inception date is 9/7/2005.

The performance data quoted represents past performance, which does not guarantee future results. The investment return and principal value of an investment in the Fund will fluctuate so that an investor's shares, when redeemed, may be worth more or less than the original cost. Current performance and expense ratios may be lower or higher than the data quoted. For performance data current to the most recent month-end, visit [oppenheimerfunds.com](http://oppenheimerfunds.com). Class A returns include changes in share price and reinvested distributions, and a 5.75% maximum applicable sales charge except where "without sales charge" is indicated. Class I and Y shares are not subject to sales charge. Returns do not consider capital gains or income taxes on an individual's investment. Please refer to the disclosure statements for definition of the indices. Generally, I shares are only available to institutional investors and can only be purchased with \$1 million dollar investment. Generally, Y shares are only available to certain investors, including those in wrap-fee based programs or commissionable brokerage platforms that charge sales commission.

**Special Risks:** Foreign investments may be volatile and involve additional expenses and special risks, including currency fluctuations, foreign taxes, regulatory and geopolitical risks. Emerging and developing market investments may be especially volatile. Eurozone investments may be subject to volatility and liquidity issues. Investments in securities of growth companies may be volatile. Mid-sized company stock is typically more volatile than that of larger company stock. It may take a substantial period of time to realize a gain on an investment in a mid-sized company, if any gain is realized at all. Diversification does not guarantee profit or protect against loss.

1. OppenheimerFunds' equity style box is based on the portfolio's overall targeted capitalization range and relative valuation as determined by OFI. 2. Rankings are for A, I and Y Shares and ranking may include more than one share class of funds in the category, including other share classes of the Fund. Ranking is based on total return as of 9/30/18, without considering sales charges. Different share classes may have different expenses and performance characteristics. The Fund's total-return percentile rank is relative to all funds that are in the Morningstar Foreign Large Growth category. The highest (or most favorable) percentile rank is 1 and the lowest (or least favorable) percentile rank is 100. The top performing fund in a category will always receive a rank of 1. Fund rankings are subject to change monthly.

### Equity Style<sup>1</sup>

### Strategy Focus

The Strategy typically invests in a mix of foreign growth stocks.

### Portfolio Management

Holdings are subject to change, and are dollar weighted based on total net assets. Negative weightings may result from the use of leverage. Leverage involves the use of various financial instruments or borrowed capital in an attempt to increase investment return. Leverage risks include potential for higher volatility, greater decline of the Fund's net asset value and fluctuations of dividends and distributions paid by the Fund.

Investment Approach

The portfolio managers invest in well-established foreign businesses that appear likely to grow at a faster pace than world GDP and may benefit from four distinctive global themes that we call MANTRA®: Mass Affluence, New Technology, Restructuring and Aging. Within this framework, the portfolio managers rely on fundamental analysis to search for various types of quality growth companies with sustainable competitive advantages and above industry revenue growth.

**Alpha:** Alpha measures the difference between a fund's actual and expected returns, based on beta, and is generally used as a measure of a manager's added value over a passive strategy.

**Beta:** Beta measures a fund's sensitivity to changes in a market, represented by the named index in the average annual returns table herein. A beta greater (lower) than 1.00 indicates that the fund is more (less) sensitive to that market's movements.

**Information Ratio:** A measure of consistency of a portfolio's performance relative to its benchmark. It is calculated by subtracting the benchmark return from the portfolio return, and dividing the result (the excess return) by the standard deviation (volatility) of this excess return. A positive information ratio indicates outperformance versus the benchmark, and the higher the information ratio, the more consistent the outperformance.

**P/B Ratio:** Price-to-Book Ratio ("P/B") is the ratio used to compare a stock's market value to its book value. It is calculated by dividing the current closing price of the stock by the latest quarter's book value per share.

**P/E Ratio (LTM):** Price-to-Earnings Ratio ("P/E") is a valuation ratio of a company's current share price compared to its actual per-share earnings over the last 12 months. (LTM - Last Twelve Months)

**R-Squared:** R-squared reflects the percentage of a fund's movements that can be explained by movements in an index.

**ROE (LTM):** Return on Equity (ROE) is a measure of quality that measures how much profit a company generates with the money shareholders have invested. The performance shown is a hypothetical investment of \$100 in each of the categories.

**Sharpe Ratio :** A risk-adjusted measure that measures reward per unit of risk. The higher the Sharpe Ratio, the better. The numerator is the difference between the portfolio's annualized return and the annualized return of a risk-free instrument. The denominator is the portfolio's annualized standard deviation (population).

**Standard Deviation:** Standard deviation is a widely used measure of performance volatility.

**Tracking Error:** When using an indexing or any other benchmarking strategy, the amount by which the performance of the portfolio differed from that of the benchmark. In reality, no indexing strategy can perfectly match the performance of the index or benchmark, and the tracking error quantifies the degree to which the strategy differed from the index or benchmark.

**Turnover:** Turnover ratio is defined as a change in the securities held by the Fund.

**Upside/Downside Capture Ratio:** Statistical measures of exposure to risk versus returns. This measurement reveals to what degree a portfolio captures the market moves, both up and down in a given period. An Upside Capture Ratio greater than 100 means the portfolio is capturing more positive returns than the index in the same up period. Conversely, a Downside Capture Ratio of less than 100 means the portfolio is capturing less negative returns than the index in the same period.

**Weighted Avg. Mrk. Cap Weighted Median Mrk. Cap:** The average market capitalization (weighted) is the weighted average of the market capitalization of each stock in a portfolio or index. In such groups of stocks, larger companies account for a greater portion of the portfolio or index. The median market capitalization (weighted) is the weighted midpoint of the market capitalization in the portfolio or index sorted distribution at which 50% of cumulative weight of the portfolio or index weight is represented.

The Morningstar Analyst Rating is not a credit or risk rating, but a subjective evaluation performed by the analysts of Morningstar, Inc. (Mstar.) Mstar evaluates funds based on five key pillars (process, performance, people, parent and price). Mstar's analysts use this evaluation to identify funds they believe are more likely to outperform over the long term on a risk-adjusted basis. Analysts consider quantitative and qualitative factors and the weighting of each pillar may vary. The Analyst Rating reflects an overall assessment and is overseen by Morningstar's Analyst Rating Committee. The analyst rating scale is five-tiered, with three positive ratings (Gold, Silver, Bronze), a Neutral Rating and a Negative Rating, with Gold being the highest rating and Negative being the lowest rating. **The Mstar analyst Ratings should not be used as the sole basis in evaluating a mutual fund and are based on Mstar's current expectations about future events. Mstar does not represent ratings as a guarantee. Analyst Ratings involve unknown risks and uncertainties which may cause Mstar's expectations not to occur or to differ significantly.**

The MSCI® ACWI ex-US is designed to measure the equity market performance of developed and emerging markets and excludes the U.S. The index is unmanaged and cannot be purchased directly by investors. Index performance is shown for illustrative purposes only and does not predict or depict performance of the Fund. **Past performance does not guarantee future results.**

Shares of Oppenheimer funds are not deposits or obligations of any bank, are not guaranteed by any bank, are not insured by the FDIC or any other agency, and involve investment risks, including the possible loss of the principal amount invested.

*Before investing in any of the Oppenheimer funds, investors should carefully consider a fund's investment objectives, risks, charges and expenses. Fund prospectuses and summary prospectuses contain this and other information about the funds, and may be obtained by asking your financial advisor or visiting [oppenheimerfunds.com](http://oppenheimerfunds.com).
